UCDP CID version 23.2 fixes

Version 23.2 of the UCDP CID is a patch update. It fixes a number of errors in the original 23.1 release. Errors were mainly related to observations duplicating across both the dyad-year and the dyad-issue-year dataset. Minor errors with incorrect dyad ids were also fixed.

The dyad-year dataset has been somewhat modified in terms of variables, with variables such as insurgent_group, location, conflict (name), and umbrella being dropped as they cause duplication of observations.
