Introduction

This document gives a historical record of the changes made to the dataset since its initial release. It will also contain, if applicable, a list of known errata that will be updated in the next release of the dataset. We encourage scholars using the data to always use the latest version available if possible, but provide this list as a reference point as to whether or not an upgrade from a previous release of the data is necessary for a particular analysis.

Please note that the errata listed here should not be considered an exhaustive list of changes for the upcoming version, as newly discovered errors may be added at any time.

Change in ConflictID

UCDP codes three different categories of organized violence and there has been a problem of mix-ups with regards to conflict id:s. Thus, in order to prevent confusion, the UCDP/PRIO Armed Conflict Dataset (which focuses on state-based conflicts) has introduced a '1' and a dash before the id. Non-state conflicts (http://www.pcr.uu.se/research/ucdp/datasets/ucdp_non-state_conflict_dataset/) have a '2' and a dash before the id.

Name change for states

- All entries for Vietnam have been changed to Vietnam (North Vietnam).
- All entries for North Yemen have been changed to Yemen (North Yemen).

Slightly revised format for startdates

As the UCDP event coding and georeferencing process has progressed, more precise information on conflict events have been found and systematised. To provide the user with as precise information as possible, some changes have thus been made to the format in which startdates are reported. For more information on this, see the codebook at http://www.pcr.uu.se/research/ucdp/datasets/ucdp_prio_armed_conflict_dataset/.

New format for startdates

In order to streamline UCDP's data outputs with regard to the format for writing startdates, this has been altered in version 4-2012 of the dataset. In previous versions, a startprecision of 3 (meaning that day is unknown; month and year are

precisely coded) or 4 (month is assigned; year is coded precisely) meant that the day was set to the first of that month. In this version, however, this has been changed to the last of the given month. Furthermore, while in previous versions a startprecision of 5 (day and month are unknown, year is coded precisely), 6 (year is assigned) or 7 (year of first death is missing) meant that the date was set to 1 January, this has now been changed to 31 December.

New variable included

Version 4-2011 of the dataset includes a new variable: SideBID. SideBID is the unique identifier of the actor on side B in the conflict. For government actors, the Gleditsch & Ward (2007) country codes are used. For non-state actors, the ID is taken from the UCDP Actor Dataset (<http://www.pcr.uu.se/research/ucdp/datasets/>).

A note on some name changes

In version 4-2010, an effort has been made to streamline the names of the states included. Furthermore, UCDP has continued the effort to include easily understood and commonly known names, wherefore for instance the name North Korea is used instead of People's Republic of Korea. In previous versions this has not been done full out, but in version 4-2010 we have tried to make all the necessary changes. It should subsequently be noted that while all state actors in the dataset are given Gleditsch and Ward numbers, there are a number of instances where we differ from Gleditsch and Ward when it comes to the names of the states.

The following changes have been made:

Two notes on name changes

In a continued effort to streamline the way that we write names in our datasets and databases, UCDP has applied a new rule when dealing with splinter groups. If a group splinters and it is clear which group is the faction as they take a somewhat new name (e.g. Palipehutu–FNL in Burundi, splitting from the original Palipehutu) the name is written with a long hyphen without any spaces. If, on the other hand, the splinter does not take a new name, but maintains that they are the original group (for coding rules regarding how we determine which grouping is the faction, see the UCDP Dyadic Dataset codebook at http://www.pcr.uu.se/research/UCDP/data_and_publications/datasets.htm) UCDP needs to create a name in order to be able to separate the factions in the data. The faction is then given the original name, followed by a space, a long hyphen, a space and then the initials of the leader of the group. An example is the faction of FRUD that kept on fighting in Djibouti when the main part of the group had signed a peace agreement. The faction's leader was called Ahmed Dini, and the name of the group was subsequently set as FRUD – AD.

In Version 4-2009, another change is that we have chosen to use the same name for a group for all years of the conflict, even if it has in fact changed names during the conflict period. Thus, instead of recording PRA (Popular Resistance Army) for Uganda 1982, we have recorded NRA (National Resistance Army) for all years (1982-86), even though the group only changed its name from PRA to NRA in 1983. In earlier versions the name history could be seen in the name (e.g. PRA/NRA and UDCA/LRA). This is thus not the case in version 4-2009. However, a special rebel group dataset will be released in July where the name history of all groups registered in UCDP data will be included. The dataset will be available at http://www.pcr.uu.se/research/UCDP/data_and_publications/datasets.htm

Misc. Changes*General*

- Actors registered on Side B have been specified as a result of the creation of the UCDP Dyadic dataset.
- Major changes have been made to practice of coding startdates. Startdate still denote the first battle-related death in the conflict, but unlike in previous versions of the data, the startdate never changes. Thus, even if there is a complete change on side B, the startdate remains the same, serving as an indication of when the conflict as a whole first resulted in a battle-related death. While the column Startdate2 remains, the data coded here is altered. Instead of providing information of the date when the conflict *for the first time* reached 25 battle-related deaths, it now gives the date, as precise as possible, when the *latest episode of conflict activity* reached 25 battle-related deaths. This was previously coded under EpisodeStartDate. For more information on this, see the UCDP/PRIO Armed Conflict Dataset Codebook.
- Apart from changes in the *practice* of coding startdates, major revisions have been made to both startdates and startdate2, as the variable has been thoroughly scrutinized.
- Groups previously called “Military faction” have been re-named in an effort to make their names more informative. As a rule of thumb our first option has been to use the name of the coup leader(s): Military faction (forces of xx).

16 Changes from Version 4-2006 to 4-2006b

Some of the changes reported in the 4-4006 release were incorrect and have been changed back to the values reported in 3-2005b. These are mainly values set for start dates and related precision coding. There are some inconsistencies between the coding criteria for start dates in the code book and the actual dates reported in the dataset. These inconsistencies are going to be addressed in the next version of the dataset.

17 Changes from Version 3-2005b to 4-2006

There have been made several changes to the dataset from version 3 to version 4.

A new ID for conflict has been introduced and the old fields; Primkey, ID and SubID have been removed. The main conflict table is unique on the combination of ID and Year. It is still possible to calculate “Sub Conflicts” based on changes in type and years without conflict. We are working on how to indicate major changes in the opposition side which at a later stage can be used to infer sub conflicts.

Side_A and Side_B have been split into four variables to indicate the difference between main and supporting actors. For a more thorough explanation, see the codebook.

The Intensity variable has been simplified into categories 1 and 2 (down from three categories). Value 1 is indicating battle deaths accumulating to ≥ 25 . Value 2 indicates battle deaths accumulating to ≥ 1000 . A new variable, Cumulative Intensity, has been introduced to indicate if the conflict so far has accumulated ≥ 1000 battle deaths.

The variables geo-referencing the conflicts have not been updated and are therefore not included in this years version of the dataset.

Changes made to the coding of individual observations are documented below:

20 Changes from Version 2.1 to Version 3.0

With this release the dataset has undergone substantial revision. Due to the changes in our data structure we will not list the affected observations from the old format. However, we do provide an overview of the changes for your reference. We encourage all researchers who wish to update to Version 3.0 to download the appropriate file(s) in their entirety.

The changes are recorded under five different headings: firstly, conflicts that have been completely removed from the dataset are listed; secondly, conflict years that have been excluded are listed; thirdly, new conflicts, previously not included in the dataset, are listed; fourthly, new years of conflict activity are noted; lastly, all other types of miscellaneous changes, e.g. changed SubIDs and changes in names of opposition organisations, are listed.

Apart from these changes, two further things are important to note. First and foremost, the structure of the dataset has been modified and is now in a conflict-year format. Important to note is also that the information given for the post-1989 period is more precise in the revised version. In version 2.1 of the dataset, information on the exact years that an opposition organisation was active was not available. In version 3.0 we have been able to provide a more precise coding of side B due to the new format of the dataset. Unfortunately, the information is not yet as detailed in the period 1946–1988.

| Primkey | Lat (ver 2.0) | Lat (ver 2.1) | Lon (ver 2.0) | Lon (ver 2.1) | Radius (ver 2.0) | Radius (ver 2.1) |
